### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance:

Regarding claim 1. The nearest prior art as shown in Pitman and Swierczek fails to teach a method for identifying a broadcast source of content comprising: receiving and audio sample and a time at which the audio sample was recorded, identifying characteristics of the audio sample and an estimated time offset of the audio sample, the estimated time offset of the audio sample defining a time difference between a beginning of the original recording and a beginning of the audio sample, comparing the characteristics and the estimated time offset of the audio sample with characteristics and time offsets of broadcast samples taken from broadcast stations and taken at approximately the time at which the audio sample was recorded; each of the time offsets of the broadcast samples defining a time difference between a beginning of a broadcast sample and a beginning of a corresponding original recording and based on the comparison, identifying a broadcast station from which the audio sample was broadcast.

Regarding claim 10. The nearest prior art as shown in Pitman and Swierczek fails to teach a method for identifying a broadcast source of content comprising: comparing an identity of an audio sample with identities of broadcast audio samples taken from broadcast channels being monitored; comparing a time offset of the audio sample with time offsets of the broadcast audio samples, wherein a time offset of a sample defines a relative time offset of the sample plus an elapsed time between when the sample was taken and a common reference time, wherein the sample corresponds

to a segment of a media file and the time offset of the sample defines a time difference between a beginning of the media file and a beginning of the sample, and based on substantially matching identities and substantially matching offsets, identifying a broadcast channel from which the audio sample was recorded.

Regarding claim 16. The nearest prior art as shown in Pitman and Swierczek fails to teach a monitoring station comprising: broadcast channel samplers for sampling audio from respective broadcast stations; an audio recognition engine for determining characteristics of the audio sampled from the respective broadcast stations, and for determining an estimated time offset of the audio between a beginning of an original recording from which the audio sample was taken and the time at which the audio sample was taken and a processor for receiving a user audio sample, comparing the characteristics and the estimated time offset of the audio sampled from the stations and taken at approximately the time at which the user audio sample was recorded and a time offset of the user sample, and based on the comparisons identifying a broadcast station from which the user audio sample was broadcast.

Regarding claim 24. The nearest prior art as shown in Pitman and Swierczek fails to teach a method for identifying a broadcast source of content comprising: recording an audio sample; recording a time at which the audio sample was recorded; identifying characteristics of the audio sample and an estimated time offset of the audio sample, the estimated time offset defining from a time difference between a beginning of a corresponding identified content file and when the recording of the audio sample begins; recording audio samples for each of a plurality of broadcast stations, recording

a time at which each of the audio samples from each of the plurality of broadcast stations was sampled, identifying characteristics of the audio sample and an estimated time offset of the audio sample, the estimated time offset of the audio sample defining a time difference between a beginning of the original recording and a beginning of the audio sample, comparing the characteristics and the estimated time offset of the audio sample with characteristics and time offsets of broadcast samples taken from broadcast stations and taken at approximately the time at which the audio sample was recorded; each of the time offsets of the broadcast samples defining a time difference between a beginning of a broadcast sample and a beginning of a corresponding original recording and based on the comparison, identifying a broadcast station from which the audio sample was broadcast.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to PHILIP J. SOBUTKA whose telephone number is (571)272-7887. The examiner can normally be reached on Monday - Friday, 10:30am - 7:00pm.

4. The central FAX number for the office is 571-273-8300.

Most facsimile-transmitted patent application related correspondence is required to be sent to the Central FAX Number

CENTRALIZED DELIVERY POLICY: For patent related correspondence, hand carry deliveries must be made to the Customer Service Window (now located at the Randolph Building, 401 Dulany Street, Alexandria, VA 22314), and facsimile transmissions must be sent to the Central FAX number, unless an exception applies. For example, if the examiner has rejected claims in a regular U.S. patent application, and the reply to the examiner's Office action is desired to be transmitted by facsimile rather than mailed, the reply must be sent to the Central FAX Number.
